AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior versions, and listings, of claims in the application:

1. (Currently amended) A light emitting heterostructure comprising:
 - a substrate;
 - a light generating structure formed over the substrate;
 - an electron blocking layer formed over the light generating structure, wherein the electron blocking layer allows light to pass therethrough;
 - a distributed semiconductor heterostructure Bragg reflector (DBR) structure formed over the light generating structure electron blocking layer; and
 - a p-type layer formed over the DBR structure.
2. (Canceled)
3. (Original) The heterostructure of claim 1, further comprising:
 - a buffer layer formed on the substrate; and
 - a second layer formed on the buffer layer, wherein the light generating structure is formed on the second layer.
4. (Original) The heterostructure of claim 3, further comprising a contact layer formed on the second layer.

5. (Original) The heterostructure of claim 1, further comprising a contact layer formed above the DBR structure.

6. (Original) The heterostructure of claim 5, further comprising a metal layer formed on the contact layer.

Claims 7-8 (Withdrawn)

9. (Original) The heterostructure of claim 1, further comprising a reflective layer formed over the DBR structure.

10. (Original) The heterostructure of claim 1, wherein the substrate comprises a transparent substrate.

11. (Currently amended) A light emitting device comprising:

a substrate;

an n-type layer formed over the substrate;

a light generating structure formed over the n-type layer;

an electron blocking layer formed over the light generating structure, wherein the electron blocking layer allows light to pass therethrough;

a distributed semiconductor heterostructure Bragg reflector (DBR) structure formed over the light generating structure electron blocking layer; and

a p-type layer formed over the DBR structure.

12. (Original) The device of claim 11, further comprising a reflective layer formed on the p-type layer.

13. (Currently amended) The device of claim 12, further comprising A light emitting device comprising:

a substrate;

an n-type layer formed over the substrate;

a light generating structure formed over the n-type layer;

a distributed semiconductor heterostructure Bragg reflector (DBR) structure formed over the light generating structure;

a p-type layer formed over the DBR structure;

a reflective layer formed on the p-type layer; and

a contact layer formed on the p-type layer, wherein the reflective layer and the contact layer form at least one of [:] a set of alternating stripes [and] or a set of alternating squares.

14. (Original) The device of claim 11, further comprising:

a first contact formed on the n-type layer; and

a second contact formed above the p-type layer.

15. (Currently amended) The device of claim 11, wherein the device comprises at least one of [.]
a light emitting diode (LED), an ultraviolet LED, and or a laser.

16. (Currently amended) An ultraviolet light emitting heterostructure comprising:
an n-type layer;
a light generating structure formed over the n-type layer;
an electron blocking layer formed over the light generating structure, wherein the electron
blocking layer allows light to pass therethrough;
a distributed semiconductor heterostructure Bragg reflector (DBR) structure formed over
the light generating structure electron blocking layer; and
a p-type layer formed over the DBR structure.

Claims 17-20 (Withdrawn)

21. (Previously presented) The heterostructure of claim 16, further comprising a substrate,
wherein the n-type layer formed over the substrate.

22. (Previously presented) The heterostructure of claim 1, further comprising an n-type layer
formed over the substrate, wherein the light generating structure is formed over the n-type layer.
